DataPower DataPower XS40 XML Security Gateway Release 3 Contact Steve Green at (sgreen@datapower.com)	All web servers. The XS40 sits as a proxy in the line of traffic in front of the web server. It inspects each message coming in, and then performs XML security processing before sending only the valid messages onto the backend server, and similarly for response messages from the backend server to the client. The XS40 is therefore agnostic of the backend server.	All OS/Platforms. The XS40 is a self-contained network device. It is not software loaded on a server. Therefore, it is agnostic of any OS for itself or the backend server.	• LDAP, • SAML, • RADIUS	Not applicable	$65,000. Corporate discount available.
